Treatment for Abdominal Fat Reduction

Study participants must be between the ages of 18 – 60 years of age and seeking treatment for the reduction of abdominal fat.

Participants will receive 3 treatments at two week intervals. After the final treatment, participants must agree to return to the office for follow-up visits at 4 weeks, 8 weeks, and 12 weeks.

Inclusion Criteria:

- Healthy male or female between the ages of 18 – 60
- Willing to undergo treatment for reduction of abdominal fat
- Stable weight, diet and exercise for the duration of the study
- Body Mass Index (BMI) greater than 28

Exclusion Criteria:

- Any history of hypertension, ischemic heart disease, congestive heart failure
- Any history of prior treatment for abdominal fat (e.g., liposuction)
- Any history of non-invasive body contouring procedures in the treatment area less than 12 months prior to study enrollment
- Any history of skin diseases or keloid scarring
- Excess sagging skin, significant skin wrinkles or skin laxity
- Females who are pregnant, breastfeeding or have given birth within the last 12 months
- Is currently enrolled in an investigational drug or device trial, or has been enrolled in an investigational drug or device trial within 3 months prior to entering this study
